Summary

Enterprise AI engineer and solutions lead with a record of deploying production AI agents, RAG systems, and LLM-powered workflows for government and commercial customers. Experience spans data pipelines, prompt engineering, multi-agent architecture, and customer onboarding. Comfortable owning technical relationships with strategic accounts, translating ambiguous requirements into shipped products, and iterating on agent performance through rigorous evaluation.

Education

Carnegie Mellon University

Bachelor of Science in Information Systems, Minor in Computer Science

Experience

Shipcom AI

January 2026 – Present

AI Solutions Lead

Remote

- Design and deploy an LLM-powered compliance tool on GovCloud, with custom data connectors that ingest unstructured Air Force documentation and surface Risk Assessment Code scores through a structured output pipeline.
- Build and iterate on the prompt engineering layer for the compliance tool, implementing evaluation workflows to measure output accuracy against expert-labeled test cases and reduce hallucination rates across regulatory edge cases.
- Architect the data pipeline for an Air Force inventory automation system, integrating hardware sensor inputs with backend APIs to replace manual paper workflows and enable real-time inventory state tracking.

Job Tracker

September 2025 – Present

Founder

Remote

- Founded and built an ML-powered job application tracking platform, ingesting unstructured Gmail data via OAuth and transforming it into application-state predictions for end users, demonstrating full-stack technical ownership.
- Implemented evaluation and error analysis workflows to measure classification accuracy, analyze failure cases, and iterate on prompt and model behavior, achieving a 20% reduction in misclassification and hallucination rates.
- Built data pipelines in Python using pandas and Firestore; designed system for reliability and scale with end users.

Microsoft

August 2024 – July 2025

Technical Account Manager

Redmond, WA

- Partnered with government customers to design and deploy AI-driven automation workflows, translating operational needs into scalable technical solutions and driving onboarding, adoption, retention, and expansion strategy.
- Co-built an OpenAI-powered support insights agent that processed 500+ customer tickets; personally contributed prompt templates, input validation logic, and context retrieval to surface trends for account teams.
- Drove data-backed capacity planning and resource alignment, achieving #1 contract efficiency (19% vs. 3% team avg).

Carnegie Mellon Schwartz Research Lab

January 2023 – August 2023

Machine Learning Researcher

Pittsburgh, PA

- Designed and trained custom ML pipelines in Python to analyze RNA sequences, improving early breast cancer detection accuracy by 18% and precision by 22%.

Delta Dental of Michigan

May 2022 – August 2022

Software Engineer Intern

Okemos, MI

- Developed a full stack insurance recommendation platform using JavaScript, Node.js, and MongoDB for employees to recommend dental packages to customers, reducing manual work 40% and scaling to hundreds of users.
- Built a Go-based data generator and validated REST APIs, streamlining testing workflows and ensuring high uptime.

Projects

Personal Second Brain | *Anthropic API, Markdown Agents, Context Engineering*

- Built a private AI knowledge system with self-updating Markdown-based agents to organize personal notes, project ideas, networking plans, conference research, and career strategy into reusable context.

Pocket-LLM | *Python, Transformers, Deep Learning*

- Built a lightweight GPT-style model from scratch for experimentation and training on small datasets.
- Implemented tokenizer, transformer architecture, and inference pipeline for local deployment.

Technical Skills

Languages: Python, Java, C, Go, JavaScript, TypeScript, SQL, HTML/CSS

Developer Tools: VS Code, Git, Unix CLI, Jupyter Notebook, Azure, Firebase, Docker

Technologies/Frameworks: Node.js, React, FastAPI, REST APIs, Express.js, MongoDB, PostgreSQL, Transformers, PyTorch, TensorFlow, OpenAI API, Anthropic API, Chrome APIs, Vector Similarity Search, Azure ML

Certifications: Azure AI Fundamentals, Security Compliance and Identity Fundamentals, Copilot for Security, Cybersecurity Foundation, Salesforce AI Champion, Anthropic Introduction to Model Context Protocol
